

Tree Maze

My project is a tree-themed maze game where the user navigates to the tree at the end of the maze. They can also collect the apples and there may be a surprise if all of them are collected. My intention for the project is to raise awareness for our environment because if we continue to destroy our world, our future will not be bright. One way to help our environment is by planting trees because they provide oxygen for us and they are key components to many ecosystems. While there are many other ways to save our planet, I chose trees because I love forests and I hate to see them cut down.
